Brochure Date: March 31, 2025

This brochure provides information about the qualifications and business practices of Fred Alger Management, LLC (“FAM”). If you have any questions about the contents of this brochure, please contact us at (212) 806-8800. The information in this brochure has not been approved or verified by the United States Securities and Exchange Commission (the “SEC”) or by any state securities authority.

Additional information about FAM is available on the SEC’s website at www.adviserinfo.sec.gov.

Please note that registration of FAM with the SEC does not imply any level of skill or training.

(2) Material Changes:

The last annual updating amendment to this brochure was dated March 30, 2024. Material changes to this brochure since the March 2024 annual update include amendments to the following items:

Item 4 – Advisory Business: Added disclosure regarding newly offered strategy; revised disclosure regarding strategies to address name changes; revised disclosure regarding FAM’s foreign registration

Item 5 – Fees and Compensation: Added fees for the Alger Russell Innovation strategy; revised disclosure regarding fee waivers available for certain employees and family members; added disclosure regarding solicitation agreements in place with certain affiliates

Item 8 – Methods of Analysis, Investment Strategies and Risk of Loss: Added investment strategy and risk disclosure for new strategy offered by FAM; revised disclosure regarding strategies to address name changes; added disclosure regarding FAM’s use of third party services in its investment process; added disclosure regarding FAM’s sell discipline; revised disclosure regarding FAM’s use of artificial intelligence and alternative data

Item 10 – Other Financial Industry Activities and Affiliations: Added disclosure regarding FAM’s research sharing agreement with affiliates

(4) Advisory Business:

Introduction

FAM is a privately owned investment advisory firm that was founded in 1964. FAM is wholly-owned by Alger Group Holdings, LLC (“AGH”), which is wholly-owned by Alger Associates, Inc. (“AAI” and together with FAM’s affiliates, “Alger”). FAM is under common ownership with Weatherbie Capital, LLC (“WC”) and Redwood Investments, LLC (“RI”), each, a registered investment adviser. Alexandra D. Alger, Hilary M. Alger and Nicole D. Alger together own (directly or through trusts they have created for the benefit of their families) approximately 35%, 35% and 29%, respectively, of AAI.

FAM specializes in research and portfolio management of exchange listed and over-the-counter equity securities of U.S. and foreign companies. To a lesser extent, FAM also provides investment advice with respect to other securities, including options contracts on various securities and securities indices, warrants, private placements, convertible securities, corporate debt securities, mutual fund shares, exchange-traded fund shares, swaps, United States Government and Agency securities and currency contracts. FAM is also registered as an investment adviser, or operating under an exemption from registration, in Australia and Canada.

FAM offers multiple investment strategies, including Spectra, Capital Appreciation, Socially Responsible (“SRI”) Capital Appreciation, Focus Equity, Large Cap Growth, Alger 35, Dynamic Opportunities, Dynamic Return, Growth & Income, Mid Cap Growth, Mid Cap Focus, Mid Cap 40, Small Cap Growth, Small Cap Focus, Health Sciences, Life Sciences Innovation, Responsible Investing, Balanced, Concentrated Equity, AI Enablers & Adopters, and Alger Russell² Innovation. The Specialized Growth, Enduring Growth and Select 15 Strategies are managed by FAM’s affiliate WC. Please see WC’s Form ADV Part 2A for additional information on these strategies. The Global Equity, International Opportunities, and Emerging Markets Strategies are managed by FAM’s affiliate RI. Please see RI’s Form ADV Part 2A for additional information on these strategies.

FAM provides both discretionary and non-discretionary investment advisory services to institutional investors through separate accounts, U.S. and foreign registered and privately offered funds, as well as through third-party sponsored funds and bank sponsored collective investment trusts; and to retail investors through wrap programs and U.S. and foreign registered funds.

² The Alger Russell Innovation strategy has been developed solely by FAM. The strategy is not in any way connected to or sponsored, endorsed, sold or promoted by the London Stock Exchange Group plc and its group undertakings (collectively, the “LSE Group”). Russell is a trading name of certain of the LSE Group companies. All rights in the Alger Russell Innovation Index (the “Index”) vest in the relevant LSE Group company which owns the Index. FTSE® “Russell®”, “FTSE Russell®”, “FTSE4Good®”, “ICB®”, “The Yield Book®,” are trade mark(s) of the relevant LSE Group company and is/are used by any other LSE Group company under license. The Index is calculated by or on behalf of FTSE International Limited, FTSE Fixed Income, LLC or its affiliate, agent or partner. The LSE Group does not accept any liability whatsoever to any person arising out of (a) the use of, reliance on or any error in the Index or (b) investment in or operation of the strategy. The LSE Group makes no claim, prediction, warranty or representation either as to the results to be obtained from the strategy or the suitability of the Index for the purpose to which it is being put by FAM.

Clients can and relevant laws, rules, or regulations will impose restrictions on investing in certain securities or certain types of securities, or on the percentage of ownership in any single security, sector or industry. In addition, each of FAM's strategies follows an investment discipline with their own portfolio construction parameters. Accordingly, FAM will not enter into an advisory relationship with any prospective client whose investment objectives are incompatible with FAM's investment philosophy or strategies or who seeks to impose unduly restrictive guidelines.

For client accounts subject to the Employee Retirement Income Security Act of 1974, as amended ("ERISA", and such accounts, "Plan Accounts"), FAM provides services both as a registered investment adviser under the Investment Advisers Act of 1940, as amended (the "Advisers Act"), and as a fiduciary as that term is defined in Section 3(21)(A) of ERISA.

Wrap Fee Programs

Clients can access certain of FAM's investment strategies through programs sponsored by unaffiliated financial intermediaries, advisers or planners in which FAM serves as an investment adviser ("wrap programs"). The wrap programs for which FAM serves as an investment adviser are listed in Section 5.I.(2) of FAM's Form ADV Part 1, a copy of which is available either 1) on request or 2) on the SEC's website at the following link:

<https://adviserinfo.sec.gov/firm/summary/106750>

FAM offers advisory services through the following types of wrap programs:

1. *Single Contract Program.* In Single Contract Wrap Programs, clients pay the sponsor of the wrap program a single fee (the wrap fee), the sponsor pays a percentage of the wrap fee to FAM for its investment management services, and the sponsor executes trades and administers the account without additional charges to the clients. Each client enters into an agreement with the sponsor to provide discretionary investment management services to the client and each investment manager available in the program maintains a sub-advisory agreement with the sponsor.
2. *Dual Contract Program.* In Dual Contract Wrap Programs, sponsors offer clients a package of services, including trade execution and account administration, along with a menu of investment managers to choose from. Each client enters into a contract with the sponsor, which covers custody, brokerage and other services, and separately enters into an investment management agreement with FAM. In these programs, FAM is generally directed by clients to effect transactions for their accounts through the program sponsor or the sponsor's broker-dealer affiliate; however, FAM has the ability to effect transactions in these wrap accounts through a non-sponsor affiliated broker-dealer if doing so allows FAM to achieve better execution. Although fees and services are unbundled, clients do not pay FAM directly for its investment management services, but instead direct payments through the program sponsor or the sponsor's broker-dealer affiliate. The sponsor or its affiliate then remits payment to FAM for its investment management services.
3. *Model Portfolio Program.* In a Model Portfolio Program, FAM enters into an agreement with the sponsor to provide an initial model portfolio to the sponsor, which the sponsor then seeks to replicate for its clients. FAM will then regularly provide updated model

portfolios to the sponsor as positions and position weightings change for a strategy. FAM does not place trades on behalf of accounts in these programs and therefore has no ability to ensure that accounts conform to the model portfolio provided. Trades for model portfolios may be placed by the sponsor after FAM has placed trades for wrap programs and other clients for which it serves as investment adviser. The sponsor remits payment to FAM for its investment advisory services.

Management of Wrap Programs

In managing accounts in a wrap program, FAM generally does not invest in limited partnerships, illiquid securities, or foreign securities not traded on a U.S. exchange, and such accounts will not participate in allocations of initial public offerings. FAM also attempts to minimize the tax impact of portfolio transactions. In an effort to minimize the volume of trading for accounts in a wrap program, FAM generally has a minimum position size for a transaction. Such minimum position size may not exist for non-wrap accounts. Finally, certain wrap sponsors or clients may impose security restrictions as well as minimum cash limits on their accounts. As a result, FAM will generally impose the most restrictive limit across wrap sponsors in the affected strategy(ies).

The timing of trades for wrap accounts will generally differ from other accounts and will generally be made later in time than for other accounts managed by FAM (see Item 12: Brokerage Practices, for details about FAM's trading practices for wrap accounts). Further, FAM maintains relationships with multiple sponsors, and the timing of trades placed by FAM for wrap accounts is on a randomly selected "rotational" basis among all sponsors.

The practices described above will cause a wrap program account's performance to diverge from other accounts managed by FAM following the same strategy.

Given the structure of wrap programs and the fact that payments to FAM are received from the wrap sponsor, FAM does not believe it receives any direct compensation from clients who participate in the wrap programs (including Plan Accounts). The wrap sponsor is responsible for billing and collecting any fees owed by clients with respect to their participation in the wrap program.

Each client's ability to allocate, reallocate or redeem its investment under a wrap program is governed by the terms of the client's agreement with the wrap sponsor and the disclosure provided by the wrap sponsor. Any termination-related provisions would be found in the agreement between the client and the wrap sponsor.

For wrap program accounts, FAM generally does not negotiate brokerage commissions or other costs related to the execution of trades because those charges are generally included in the single fee paid by the client to the sponsor, and the client has generally contractually agreed to execute trades through the sponsor or the sponsor's broker-dealer affiliate. In the event that FAM selects a broker-dealer other than the sponsor or its affiliate, the client would typically pay a commission, concession, or dealer mark-up or mark-down, in addition to the wrap fee paid to the sponsor, as well as other administrative fees to settle such a transaction.

Client Assets Under Management

As of December 31, 2024, FAM managed \$20,107,500,884 of client assets on a discretionary basis, and \$534,933,786 of client assets on a non-discretionary basis.

(5) Fees and Compensation:

FAM is generally paid an advisory fee, calculated as a percentage of assets under management. FAM's standard fee schedules for separate accounts are presented below. Fees are negotiable and, as a result of client circumstances (for example, the level of investment management activity and supervision required for the client's account, the size of the account, the number and size of other accounts managed for the client and its affiliates, or the length of the relationship), certain clients pay higher or lower fees than those noted below and one client may pay a higher fee to FAM than a second client who is receiving substantially similar services.

Most clients are billed in arrears, either on a monthly or quarterly basis, with billing generally based on the account's total market value at the end of each billing period or the average net asset value over the billing period. For clients that are billed in advance, if the advisory contract is terminated before the end of the billing period, FAM will refund a pro rata portion of the advisory fee.

Employees and their immediate family members, and board members of FAM and its affiliates, as well as members of the board of trustees of FAM-advised funds, can hire FAM for investment advisory services and will be charged reduced or no advisory fees.

Fee Schedule (per annum)

<u>Large Cap Growth</u>		<u>Mid Cap Growth</u>

Wrap Program Fee Structures

Wrap account clients are generally billed by the wrap program sponsor, with a portion of such fee paid to FAM as discussed above. For its services in wrap programs, FAM generally receives fees ranging between 0.17% and 0.50% of an account’s market value annually.

Custodial and Brokerage Fees

Each client (other than wrap program clients described above) must select a custodian (generally a bank or broker-dealer) to provide custodial services in connection with the management of its account. Clients will incur the cost of these services, including any additional costs charged by custodians.

FAM’s advisory fees also generally do not include the costs, expenses or commissions that broker-dealers may charge in connection with transactions executed on behalf of an account, including mark-ups, mark-downs, or dealer spreads that broker-dealers may receive when acting as principal in certain transactions. Brokerage is discussed in more detail in Item 12: Brokerage Practices.

Brokerage Through FAC

Fred Alger & Company, LLC (“FAC”), an affiliate of FAM, is a registered broker-dealer. FAC does not conduct public brokerage business and generally limits its execution services to trades placed on behalf of FAM’s clients. Subject to the requirements of applicable law, FAM clients may choose whether FAC will be included among broker-dealers that can be selected by FAM for trade execution. FAM generally does not reduce its advisory fees to offset any commission fees FAC charges. Information about FAM’s conflicts related to its affiliates, such as FAC, is described more fully below in Item 10: Other Financial Activities and Affiliations.

Investment Fund Fees

Investors can access FAM’s capabilities through U.S. and foreign registered and privately offered funds advised or sub-advised by FAM. In such cases, FAM or its affiliates can receive, in addition to advisory fees, performance-based, shareholder servicing, administration, co-administration and/or distribution fees directly from the funds, from the investors in the funds, and/or from the funds’ other investment advisers for which FAM acts as a sub-adviser. The fees and other contractual arrangements for each of these funds are described in the prospectus or other offering documents for each such vehicle and differ from the separate account fees described above.

Subject to requirements of applicable law and the consent of each client (if applicable), FAM can invest its client assets in funds managed by FAM, WC or RI. In the event of investment of a client’s assets in such funds, FAM will, if required by applicable law, take steps to avoid having the client pay duplicative fees; however, if permitted by applicable law, there can be no assurance that duplicative fees will not be charged.

Compensation for the Sale of Securities and Other Investment Products

FAM has entered into solicitation agreements with each of WC and RI, and may introduce prospective clients to WC and RI. Subject to the terms of these agreements and applicable federal securities laws, each of RI and WC pays FAM an annual solicitation fee for such services. While FAM does not receive compensation for sales of FAM-advised investment products, except with respect to the solicitation agreements with each of WC and RI, FAC serves as the principal underwriter for certain U.S. registered mutual funds and ETFs advised by FAM (or sub-advised by RI and WC) and, in some cases, receives an asset-based fee for distribution and/or shareholder servicing from the mutual funds advised by FAM. FAC will also receive fees related to contingent deferred sales charges of certain share classes of such mutual funds. In addition, FAC may act as a placement agent for certain private funds managed by FAM and WC, and may receive compensation for such services from FAM, WC, or the private funds.

FAC sales personnel receive commission-based compensation for the sale of products or services for which FAM serves as an adviser. Such commission-based compensation may be higher for some products or services than others and thus the incentive to sell those products may be greater. This practice may present a conflict of interest and give FAC sales personnel an incentive to recommend investment products based on the commission they would receive, rather than on a client’s needs. However, Alger provides regular employee training to sales personnel on their responsibility to put clients’ best interests first when recommending investment products. Clients have the option to purchase investment products that FAC sales personnel recommend through other brokers or agents that are not affiliated with FAM or FAC. For the avoidance of doubt, FAC sales personnel do not recommend investment products to retail investors.

FAM’s affiliate, Alger Management Ltd. (“AML”), a UK registered investment adviser also serves as the distributor for the Alger SICAV, for which it receives distribution fees.

(6) Performance Based Fees and Side-by-Side Management:

For certain clients, FAM receives performance-based fees, in addition to asset-based advisory fees. These clients include separate accounts and private funds. These accounts and funds are managed

by personnel of FAM who also have portfolio management responsibilities for accounts and funds for which only asset-based advisory fees are received. In such situations, portfolio management personnel may have an incentive to allocate better performing investments to performance fee-based accounts, but also may have an incentive to allocate riskier investments to such accounts. As a result, in situations where FAM personnel have portfolio management responsibilities for both performance fee-based accounts and non-performance fee-based accounts, an inherent conflict of interest is present.

To attempt to mitigate these conflicts, FAM's policies and procedures seek to ensure that investment personnel make decisions based on the best interests of clients, without consideration of FAM's economic or pecuniary interests. Trades and overall performance results for performance fee-based accounts are reviewed periodically to ensure such accounts are not systematically favored.

(7) Types of Clients:

FAM offers investment advice to corporate pension plans, public plans, Taft-Hartley clients, foundations/endowments, religious organizations, sub-advisory clients, and other types of institutional investors and platforms. FAM also offers investment advice to individual investors through separately managed accounts (including wrap fee programs).

FAM's clients also include various taxable and tax-exempt institutions, and publicly and privately offered funds, both domestic and foreign.

FAM typically requires a minimum asset size of \$10 million for separate account advisory services (other than wrap program accounts). FAM may, in its discretion, waive the asset minimum for various reasons, including, but not limited to, clients or their consultants having multiple relationships with FAM, or specialty asset class assignments. FAM may also waive the asset minimum when it is adding a new strategy or trying to increase assets in an existing strategy or distribution channel.

FAM generally requires a minimum asset size ranging from \$50,000 to \$100,000 for wrap program accounts, depending on the investment strategy and sponsor arrangement. The minimum asset size may be waived in some cases.

Minimum investments in funds are listed in the offering material for each such fund. The minimum investments in funds can be waived in some cases as disclosed in the offering material.

(8) Methods of Analysis, Investment Strategies and Risk of Loss:

Investment Philosophy

Since FAM's founding in 1964, our strategies have generally focused on investing in companies undergoing Positive Dynamic Change.

We define Positive Dynamic Change as:

Companies experiencing **High Unit Volume Growth**: These “traditional” growth companies have growing revenues, growing unit volume, increasing market share, and an expanding business. High Unit Volume Growth companies may be experiencing rapidly growing demand, have a strong business model, or have market dominance.

Companies undergoing **Positive Life Cycle Change**: A catalyst drives these companies to experience a “growth renaissance,” resulting in an improving earnings trajectory leading to P/E expansion. Companies experiencing Positive Life Cycle Change may be benefitting from new management, product innovation, mergers & acquisitions/restructuring, or new regulations.

Certain strategies also seek to outperform the broad market by investing in companies that we believe are high quality, with strong competitive advantages and long growth runways, that have the potential to benefit from a positive revision cycle.

Investment Strategies

The following is a brief description of each of FAM’s strategies. More detailed information about additional considerations for FAM’s strategies can be found at www.alger.com. The Specialized Growth, Enduring Growth and Select 15 Strategies are managed by FAM’s affiliate, WC, as a sub-adviser to FAM. For more information about how WC manages these strategies, please see WC’s Form ADV Part 2A. The Global Equity, International Opportunities, and Emerging Markets Strategies are managed by FAM’s affiliate RI, as a sub-adviser to FAM. For more information about how RI manages these strategies, please see RI’s Form ADV Part 2A.

Spectra: The Spectra strategy primarily invests in growth equity securities of U.S. companies identified through our fundamental research as demonstrating promising growth potential, and engages in short selling (up to approximately 10% of the market value of the portfolio).

Capital Appreciation: The Capital Appreciation strategy primarily invests in growth equity securities of companies of any size identified through our fundamental research as demonstrating promising growth potential.

SRI Capital Appreciation: The SRI Capital Appreciation strategy primarily invests in equity securities of companies of any size that, in the opinion of the portfolio’s management, conduct their business in a socially responsible manner. The strategy utilizes negative/exclusionary screening. FAM uses a third-party service for pre-screening based on several categories, currently including: Alcohol, Abortion/Contraceptives, Defense & Weapons, Gambling, Global Sanctions, Global Sanction - Sudan Specific, Nuclear Power, Pork, Tobacco, Global Weapons Production, Global Weapons - Cluster Bomb Specific, Adult Entertainment, Labor Relations and OFAC.

Focus Equity: The Focus Equity strategy invests in a focused portfolio of approximately 50 holdings consisting of companies of any capitalization identified through our fundamental research as demonstrating promising growth potential. The number of securities held in the strategy may occasionally exceed this range for a variety of reasons. The strategy may invest a significant portion of its assets in securities of companies conducting business within a single sector.

Large Cap Growth: The Large Cap Growth strategy primarily invests in equity securities of U.S. large capitalization companies identified through our fundamental research as demonstrating promising growth potential.

Concentrated Equity: The Concentrated Equity strategy primarily invests in approximately 20-30 holdings of equity securities of large capitalization companies identified through our fundamental research as demonstrating promising growth potential. The number of securities held in the strategy may occasionally exceed this range for a variety of reasons. The strategy will invest at least 25% of its total assets in companies focused in a variety of technology-related industries. The strategy may invest a significant portion of its assets in securities of companies conducting business within a single sector.

Alger 35: The Alger 35 strategy invests in a focused portfolio of approximately 35 holdings of primarily U.S. companies of any capitalization identified through our fundamental research as demonstrating promising growth potential. The number of securities held in the strategy may occasionally exceed this range for a variety of reasons. The strategy may invest a significant portion of its assets in securities of companies conducting business within a single sector.

Dynamic Opportunities: The Dynamic Opportunities strategy is a hedged equity strategy seeking long-term capital appreciation and lower volatility by primarily investing in long and short positions in equity securities. Utilizing a multi-discipline approach, the managers primarily invest in U.S. equities across the market cap spectrum. Short positions (single name and index) are and have historically been implemented to both generate returns and hedge portfolio exposures. The portfolio managers have expressed views on individual companies as well as indexes using derivatives in the past and may or may not do so going forward.

Dynamic Return: The Dynamic Return strategy is a long/short, hedged equity strategy that seeks long-term capital appreciation with lower volatility than the equity markets. The portfolio managers primarily invest in U.S. equities across the market capitalization spectrum and may also invest in foreign equity securities, convertible securities, debt instruments or non-equity securities. Short positions (single name and index) are and have historically been implemented to both generate returns and manage volatility. The portfolio managers have expressed views on individual companies as well as indexes using derivatives in the past and may or may not do so going forward.

Growth & Income: The Growth & Income strategy primarily invests in growth equity securities of U.S. companies identified through our fundamental research as paying a high dividend yield, having a history of strong and consistent dividend growth, or having the potential for capital appreciation and the ability to return cash to investors. In considering such companies, FAM classifies them into three categories: (1) dividend leaders—companies that generate high dividend yields; (2) dividend growers—companies that have a history of strong and consistent dividend growth; and (3) kings of cash flow—companies that have strong potential for generating capital appreciation and the ability to return significant amounts of cash to investors as a result of their free cash flow.

Mid Cap Growth: The Mid Cap Growth strategy primarily invests in growth equity securities of U.S. mid capitalization companies identified through our fundamental research as demonstrating promising growth potential.

Mid Cap Focus: The Mid Cap Focus strategy invests in a focused portfolio of approximately 50 holdings of primarily mid capitalization companies identified through our fundamental research as demonstrating promising growth potential. The number of securities held in the strategy may occasionally exceed this range for a variety of reasons. The strategy may invest a significant portion of its assets in securities of companies conducting business within a single sector.

Mid Cap 40: The Mid Cap 40 strategy invests in a focused portfolio of approximately 40 holdings of primarily mid capitalization companies identified through our fundamental research as demonstrating promising growth potential. The number of securities held in the strategy may occasionally exceed this range for a variety of reasons.

Small Cap Growth: The Small Cap Growth strategy primarily invests in growth equity securities of U.S. small capitalization companies identified through our fundamental research as demonstrating promising growth potential.

Small Cap Focus: The Small Cap Focus strategy invests in a focused portfolio of approximately 50 holdings of primarily small capitalization companies identified through our fundamental research as demonstrating promising growth potential. The number of securities held in the strategy may occasionally exceed this range for a variety of reasons. The strategy may invest a significant portion of its assets in securities of companies conducting business within a single sector.

Health Sciences: The Health Sciences strategy primarily invests in equity securities of companies in the health sciences sector identified through our fundamental research as demonstrating promising growth potential. The strategy may invest a substantial portion of its assets in a small number of securities. The number of securities held in the strategy may occasionally increase or decrease for a variety of reasons.

Life Sciences Innovation: The Life Sciences Innovation strategy seeks to generate long-term capital appreciation by investing primarily in the common stock of U.S. and non-U.S. companies within life sciences, with an emphasis on biotechnology companies. The strategy may invest a substantial portion of its assets in a small number of securities. The number of securities held in the strategy may occasionally increase or decrease for a variety of reasons.

Responsible Investing: The Responsible Investing strategy primarily invests in growth equity securities of U.S. companies identified through our fundamental research as demonstrating promising growth potential and rated as having positive environmental, social, or governance (“ESG”) practices. The strategy seeks to generate competitive risk-adjusted returns by incorporating ESG factors to analyze securities. The portfolio manager applies ESG factors with a qualitative and quantitative approach to portfolio construction guidelines.

Balanced: The Balanced strategy primarily invests in equity and fixed income securities of companies identified through our fundamental research as demonstrating promising growth potential. The equity portion is managed similarly to the Growth & Income strategy described above.

AI Enablers & Adopters: The AI Enablers & Adopters strategy primarily invests in equity securities of companies of any market capitalization that we believe will benefit from artificial

intelligence (“AI”), demonstrate promising growth potential, and are companies where AI can play a material role in potentially driving stock price performance over the next twelve to thirty-six months. We determine whether such companies benefit from AI by classifying them into two categories: AI Enablers and AI Adopters. AI Enablers include companies developing the building block components for and investing in AI infrastructure such as machinery, hardware, software, and services. AI Adopters include companies that integrate AI into their businesses to enhance their products or services or make their operations more productive. These categories may be adjusted from time to time to incorporate future developments as the area of AI evolves.

Alger Russell Innovation: The Russell Innovation strategy seeks to generate returns that closely correspond to the Alger Russell Innovation Index (the “Underlying Index”). The Underlying Index is comprised of a subset of the companies within the Russell 1000 Index, which is a broad measure of the performance of U.S. equity securities of large- and mid-capitalization growth and value companies. The Underlying Index represents innovative companies in the Russell 1000 Index based generally upon the amount such companies spend on research and development as a percentage of enterprise value.

Investment Process

Research is the foundation of FAM’s investment process and robust idea generation is a key component of our long-term success.

The search for new investment ideas derives from multiple sources including, but not limited to meetings with company management, industry seminars, independent research and analysis, and frequent discussions with customers, suppliers, and competitors of companies already followed.

Analysis

As our analysts seek to identify companies with the potential for significant change, there are two main ways their skills are used. The first is fundamental. This would be an opinion of business prospects typically arising from intensive research and fieldwork. Our analysts meet regularly with industry participants and routinely conduct surveys to gauge customer opinions. Our team seeks to forecast winners and losers by, among other things, investigating the customer demand for a new product or service or a company’s source of competitive advantage such as intellectual property, brand, platform, and management capability.

The second is analytical and is driven by taking a different approach or perspective in analysis relative to other investors. This could come from more detailed modeling of the building blocks of demand rather than simply assuming revenue growth rates.

FAM analyst financial models specific to a company’s key drivers typically include:

- Detailed multi-scenario analysis statement, balance sheet, and cash flow models.
- Valuation analysis based on discounted cash flows (e.g., EV/FCF) and comparable industry multiples (e.g., EV/EBITDA, Price/Sales, and Price/Earnings)

From time to time, FAM uses third party services, including model providers and outsourced analysts overseen by FAM analysts, to assist with completion of research analysis.

Scenario Forecasting

FAM analysts generally base their investment thesis on a company's five-year forward-looking fundamentals and translate that into a one-year forward-looking price target for the company's stock. In addition to forecasting the most likely outcome, a base-case model and corresponding one-year forward price target, analysts generally also construct bull-(best) and bear-(worst) models and price targets.

FAM's scenario forecasting is often a framework for dialogue between the portfolio manager and analysts as they assess the relative expected return and risk of each current or potential holding in the portfolio.

Dialogue

For new ideas, analysts generally provide the portfolio manager(s) an executive summary of their investment thesis in person, and through publication on FAM's shared research database. Generally included is the analyst's rationale for purchase, key drivers and catalysts, financial models and risk measurements, and any other data that the analyst thinks may be pertinent to the buy decision. The portfolio manager(s) and analyst generally discuss the merits of the investment thesis and review the underlying assumptions in detail. FAM may also utilize general information with respect to regulatory developments or industry trends affecting specific companies.

While the above approach is generally followed, the application of these principles differs by strategy. Given the increased complexities of analysis, certain Alger analysts are assigned to a specific strategy or group of strategies. Notably, Alger currently has analysts dedicated solely to large cap, mid cap, small cap, and healthcare strategies, while other analysts are assigned to cover sectors without regard to capitalization or strategy.

The portfolio manager(s) ultimately determine whether the investment is appropriate for the portfolio, and at what position size. FAM's analysts seek to regularly communicate with portfolio managers on developments in their securities, industries or sectors.

When a strategy is co-managed, the responsibilities of such portfolio managers may be shared, divided or otherwise assigned based on various factors including, but not limited to, level of strategy assets to be managed, their overall experience, their sector expertise, and such other factors as FAM believes are most efficient and effective. In all cases, each portfolio manager collaborates with the other portfolio manager(s) and analysts to develop overall strategy, outlook, and themes, which impact industry, sector and security allocations in the strategy. Responsibilities amongst portfolio managers may be fully or partially allocated to one of the portfolio managers for the purposes of day-to-day portfolio management and stock selection, implementation of trades, strategic and performance oversight, risk management, or oversight of guidelines, whether externally driven or internally developed by FAM.

Sell Discipline

Sell decisions are made by the portfolio manager(s), typically with insight from an analyst. This occurs when any of the following conditions exists:

1. A stock has reached its price target;
2. A company has failed to meet its price target and/or a reevaluation of the original rationale for purchase; or
3. A more attractive opportunity is presented by an analyst.

Environmental, Social, Governance (“ESG”)

FAM believes that ESG analysis of certain owned issuers will lead to a more in-depth and comprehensive understanding of such companies, in addition to fostering communication with the issuer regarding ESG considerations. We believe that innovative companies, including those embracing ESG practices, may be able to create value for both shareholders and broader society.

With respect to no less than 75% of the assets under management at FAM, analysts will review the ESG scores of those companies that have been assigned to them. If the company’s ESG rating is medium or better and our research uncovers no other ESG issues, no further ESG analysis is required. If the company is ranked below medium, the analyst will:

1. Identify drivers of ESG score; review in detail the reporting provided to identify the ESG issues raised.
2. Interview management with key questions about ESG issues and progress and evaluate the prospect of positive change.
3. Based on the above research and inquiry, rate the company on three scales of 1 – 5 on the probability and magnitude of the potential for positive ESG change, and the awareness of issues.
4. Publish a report that summarizes the company’s ESG issues, the results of the meeting/interview with the company, an ESG rating of the company and any other views the analyst may have. To the extent that the ESG review changes an analyst’s overall view of the company (*e.g.*, buy or sell, price target, etc.), this must be clearly expressed in the report.
5. Meet with portfolio managers as necessary to discuss the ESG report and the impact it may have on their overall view of the company.

A group of senior personnel at FAM oversee the ESG initiative.

Currently, FAM uses third-party research to provide information and guidance on ESG considerations at an industry and security specific level on both a qualitative and quantitative basis. FAM may change the sources for such information by adding or modifying the information it receives from third-party firms, selecting another third-party firm, using company provided information, or performing internal assessments. To assist with our efforts to incorporate ESG considerations in the investment process, FAM’s investment professionals have access to reports and ratings of securities (where the information is available) across certain FAM offerings.

Use of Alternative Data

Alternative data may consist of datasets that have been culled from a variety of sources, such as internet usage, payment records, financial transactions, weather and other physical phenomena sensors, applications and devices (such as smartphones) that generate location and mobility data, data gathered by satellites, and government and other public records databases (this data is sometimes referred to as “big data” or “alternative data”). FAM may use alternative data in a variety of ways, including by incorporating it into fundamental research of companies, to better anticipate micro- and macro-economic trends, and otherwise to develop or improve trading or investment themes.

Use of AI

FAM integrates AI into its operations, including its investment process, through the use of certain third-party vendors and large language model platforms. Specifically, FAM employees may utilize large language model platforms to perform research or provide assistance with other tasks. Additionally, FAM utilizes vendors that use AI in their business operations, including analytical, technological or computational function, algorithm model, correlation matrices, or similar methods or processes that optimizes for, predicts, guides, forecasts, or directs business-related behaviors or outcomes. Such information is then incorporated by FAM into its investment, sales or administrative processes.

Risk Controls

FAM’s investment philosophy and proprietary research capabilities are designed to help FAM mitigate risk by thoroughly understanding the securities in its portfolios. Through careful securities selection, diversification of holdings (although certain FAM strategies, however, may not be diversified or may be considered “concentrated”) and our investment process, FAM seeks to maintain the desired portfolio characteristics that our portfolio managers expect while managing overall risk.

FAM’s portfolio managers and analysts monitor securities held in client accounts. Portfolio managers monitor changes at the portfolio, industry and economic level and analysts focus on the specific companies. As FAM is a bottom-up securities selector, the portfolio weighting in a particular industry or economic sector is generally the result of individual security selection.

FAM additionally analyzes each strategy’s portfolio and considers several measures, including attribution analysis, to help the portfolio managers fully understand certain risk parameters of their portfolios. FAM also uses other tools to monitor the risk profile of portfolios versus their relevant benchmarks.

Under normal market conditions, for most strategies, FAM generally limits exposure to:

(A) any one economic sector to the greater of (i) 40% of a portfolio or (ii) the strategy’s benchmark weight plus 5%;

(B) any one industry to the greater of (i) 20% of a portfolio or (ii) the strategy’s benchmark weight plus 5%; and

(C) any single security to the greater of (i) 10% of the portfolio or (ii) benchmark weight.

These sector and industry limits are generally based on third-party sector and industry categorizations (e.g., Global Industry Classification Standard (“GICS”)). FAM may deviate from these limits when, for example, it believes that a sector/industry/security is undergoing profound change; offers what it thinks is a compelling opportunity or is weighted heavily in an applicable benchmark. Additionally, if a client has a limit that is more restrictive, FAM will apply such limit to the client’s account.

For certain funds, FAM has no sector, industry, or individual security limits, but otherwise follows any limits imposed by the offering documents of such funds and regulations governing such funds.

FAM manages multiple strategies and clients that, at times, can have exposure to a company through ownership of common stock, debt, warrants or other securities issued by the same company. When various client accounts own different securities issued by the same company, FAM will take steps to identify any potential conflicts, seek to mitigate such conflicts and provide adequate disclosures and reporting to clients.

Notwithstanding the risk control measures FAM has in place, it is important for clients to consider the risk of loss associated with investing in securities, and the particular risks associated with their accounts. All clients should recognize that investing in securities involves the risk of loss.

General Risks

As with any account that invests in equity securities, an account advised by FAM will fluctuate in value due to changes in the market prices of its investments. The loss of your investment is a risk of investing. An account advised by FAM may be better suited to investors who can tolerate fluctuations in their investment’s value.

The following risks apply generally to strategies managed by FAM:

Equity Securities Risk

As with any strategy that invests in stocks and other equity securities, your investment will fluctuate in value, and the loss of your investment is a risk of investing. Because stock markets tend to move in cycles, stock prices overall may decline. A particular stock’s market value may decline as a result of general market conditions that are not related to the issuing company (e.g., adverse economic conditions or investor sentiment) or due to factors that affect the particular company (e.g., management performance or factors affecting the industry). Also, a strategy’s investments may not grow as fast as the rate of inflation and stocks tend to be more volatile than some other investments, such as bonds.

Growth Securities Risk

Prices of growth stocks tend to be higher in relation to their companies’ earnings and may be more sensitive to market, political and economic developments than other stocks, making their prices more volatile. An investment in a strategy managed by FAM may be better suited to investors who

seek long-term capital growth and can tolerate fluctuations in their investment's value. Expected growth may not be realized.

Small Cap Securities Risk

There may be greater risk investing in small capitalization companies rather than larger, more established companies owing to such factors as more limited product lines or financial resources or lack of management depth. Such companies may be less financially secure than larger, more established companies. They may depend on a small number of key personnel. If a product fails or there are other adverse developments, or if management changes, an investment in a small cap company may lose substantial value. In addition, it is more difficult to get information on smaller companies, which tend to be less well known, have shorter operating histories, do not have significant ownership by large investors and are followed by relatively few securities analysts. The securities of small cap companies generally trade in lower volumes and are subject to greater and more unpredictable price changes than larger cap securities or the market as a whole. In addition, it may be difficult or impossible to liquidate a security position at a time and price acceptable to an account because of the potentially less frequent trading of stocks of smaller market capitalization. Small cap securities may be particularly sensitive to changes in interest rates, borrowing costs and earnings. Investing in small cap securities requires a longer-term view.

Mid Cap Securities Risk

There may be greater risk in investing in medium-capitalization companies rather than larger, more established companies due to such factors as inexperienced management and limited product lines or financial resources. It may also be difficult or impossible to liquidate a security position at a time and price acceptable to the strategy because of the potentially less frequent trading of stocks of medium market capitalization.

Cash Position Risk

An account may hold a significant portion of its net assets in cash (and cash equivalents), at any time, or for an extended period of time and when taking a temporary defensive position. FAM will determine the amount of a strategy's assets to be held in cash (or cash equivalents) at its sole discretion, subject to any client guidelines, based on such factors as it may consider appropriate under the circumstances. To the extent a strategy holds assets in cash and is otherwise uninvested, the ability of the strategy to meet its objective may be limited. If a strategy holds a large cash position, it may underperform relative to equity securities.

Diversification

Subject to any client guidelines, a client's portfolio may at certain times hold a few security positions that are relatively large in relation to its capital, with the result that a loss in any such position could have a material adverse impact on a client's portfolio.

Initial Public Offerings ("IPOs" or "New Issues") Risk

The volume of IPOs and the levels at which the newly issued stocks trade in the secondary market are affected by the performance of the stock market overall. If IPOs are brought to the market,

availability may be limited and an account may not be able to buy any shares at the offering price, or if it is able to buy shares, it may not be able to buy as many shares at the offering price as it would like. In addition, the prices of securities involved in IPOs are often subject to greater and more unpredictable price changes than more established stocks. IPOs have the potential to produce substantial gains. There is no assurance that an account will have access to profitable IPOs and therefore investors should not rely on any past gains from IPOs as an indication of future performance. The investment performance of a strategy during periods when it is unable to invest significantly or at all in IPOs may be lower than during periods when it is able to do so. In addition, as a strategy increases in size, the impact of IPOs on its performance will generally decrease. Securities issued in IPOs are subject to many of the same risks as investments in companies with smaller market capitalizations. Securities issued in IPOs have no trading history, and information about the companies may be available for limited periods.

Privately Placed Securities Risk

A private placement is an offering of a company's securities that is not registered with the SEC and is not offered to the public. The issuers of privately placed securities are not typically subject to the same oversight and regulatory requirements, including disclosure and other investor protection requirements, to which public issuers are subject, and there may be very little public information available about the issuers and their performance. The sale or transfer of privately placed securities may be limited or prohibited by contract or law and such investments are generally considered to be illiquid. Privately placed securities are generally not traded frequently; an account may be required to hold such positions for several years, if not longer, regardless of valuation, which may cause the account to be less liquid. The illiquidity of the market, as well as the lack of publicly available information regarding these securities, may also adversely affect the ability to arrive at a fair value for certain privately placed securities at certain times and could make it difficult for an account to sell these securities. As a result of the foregoing, investments in private placements can result in substantial or complete losses.

Sector Risk

Accounts invested in certain strategies may have a significant portion of their assets allocated to securities of companies conducting business within a single sector, as generally defined by third-party sources. Companies in the same sector may be similarly affected by economic, regulatory, political or market events or conditions, which may make the strategy's returns more vulnerable to unfavorable developments in that sector than a strategy that has a more diversified portfolio. Generally, the more broadly a strategy invests, the more it spreads risk and potentially reduces the risks of loss and volatility.

Information Technology Sector Risk

Certain accounts may be more susceptible to risks that may affect companies in the technology sector than if they were invested in a wider variety of companies in unrelated sectors. At times, the performance of such companies will lag the performance of other industries or the broader market as a whole. Certain technology related companies may face special risks that their products or services may not prove to be commercially successful. Technology related companies are also strongly affected by worldwide scientific or technological developments. As a result, their

products may rapidly become obsolete. Such companies are also often subject to governmental regulation and may, therefore, be adversely affected by governmental policies. These factors may lead to limited earnings and/or failing profit margins. As a result, the value of technology related companies' securities may fall or fail to rise. Many technology related companies' securities have historically been more volatile than other securities, especially over the short term.

Consumer Discretionary Sector Risk

The consumer discretionary sector may be affected by changes in domestic and international economies, exchange and interest rates, competition, consumers' disposable income, consumer preferences, social trends and marketing campaigns.

Health Care Sector Risk

Certain accounts may be more susceptible to risks that may affect companies in the healthcare sector than if it were invested in a wider variety of companies in unrelated sectors. At times, the performance of such companies will lag the performance of other industries or the broader market as a whole, and the performance of such companies may be more volatile. The healthcare field is subject to substantial governmental regulation and may, therefore, be adversely affected by changes in governmental policies. These factors may lead to limited earnings and/or failing profit margins. As a result, the value of healthcare companies' securities may fall or fail to rise. In addition, companies in the healthcare sector can be significantly affected by intense competition, aggressive pricing, technological innovations, product obsolescence, patent considerations, product compatibility and consumer preferences.

Industrials Sector Risk

Certain accounts may have a significant portion of their assets invested in securities of companies in the industrials sector. Industrial companies are affected by supply and demand both for their specific product or service and for industrials sector products in general. Government regulation, world events, exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these companies. Aerospace and defense companies, a component of the industrials sector, can be significantly affected by government spending policies because companies involved in this industry rely, to a significant extent, on U.S. and foreign government demand for their products and services.

Financials Sector Risk

Certain accounts may have a significant portion of their assets invested in securities of financial services companies, which means certain accounts may be more affected by the performance of the financials sector than accounts that are more diversified. Financial services companies are subject to extensive governmental regulation which may limit both the amounts and types of loans and other financial commitments they can make, the interest rates and fees they can charge, the scope of their activities, the prices they can charge and the amount of capital they must maintain. Certain events in the financials sector may cause an unusually high degree of volatility in the financial markets, both domestic and foreign, and cause certain financial services companies to incur large losses.

Communication Services Sector Risk

Communication services companies are particularly vulnerable to the potential obsolescence of products and services due to technological advancement and the innovation of competitors. Companies in the communication services sector may also be affected by other competitive pressures, such as pricing competition, as well as research and development costs, substantial capital requirements and government regulation. Additionally, fluctuating domestic and international demand, shifting demographics and often unpredictable changes in consumer tastes can drastically affect a communication services company's profitability. While all companies may be susceptible to network security breaches, certain companies in the communication services sector may be particular targets of hacking and potential theft of proprietary or consumer information or disruptions in service, which could have a material adverse effect on their businesses.

Risks of Foreign Investment

Investing in foreign securities involves risks related to the political, social and economic conditions of foreign countries, particularly emerging market countries. These risks may include political instability, exchange control regulations, expropriation, national policies restricting foreign investment, currency fluctuations, lack of liquidity, potential for market manipulation, less developed or less efficient trading markets, limited access to reliable capital, lack of comprehensive company information, differing auditing, regulatory and legal standards and lack of accounting and financial reporting standards, inflation and rapid fluctuations in inflation, withholding or other taxes, and operational risks. There may be less stringent government supervision and oversight of foreign markets than in the United States. There may be less corporate financial information publicly available, less stringent investor protection and disclosure standards.

Investment in foreign currencies is subject to the risk that those currencies will decline in value relative to the U.S. dollar, or, in the case of hedged positions, that the U.S. dollar will decline relative to the currency being hedged. Currency rates in foreign countries may fluctuate significantly over short periods of time. A decline in the value of foreign currencies relative to the U.S. dollar will reduce the value of securities held by an account and denominated in those currencies. Foreign currencies also are subject to risks caused by inflation, interest rates, budget deficits and low savings rates, political factors and government controls.

Emerging Markets Risk

The risks of foreign investments are usually much greater for emerging markets. Investments in emerging markets may be considered speculative. Emerging markets may include those in countries considered emerging or developing by the World Bank, the International Finance Corporation or the United Nations. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. They are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging markets have far lower trading volumes and less liquidity than developed markets. Since these markets are often small, they may be more likely to suffer sharp and frequent price changes or long-term price depression because of adverse publicity,

investor perceptions or the actions of a few large investors. In addition, traditional measures of investment value used in the United States, such as price to earnings ratios, may not apply to certain small markets. Also, there may be less publicly available information about issuers in emerging markets than would be available about issuers in more developed capital markets, and such issuers may not be subject to accounting, auditing and financial reporting standards and requirements comparable to those to which U.S. companies are subject.

Many emerging markets have histories of political instability and abrupt changes in policies. As a result, their governments are more likely to take actions that are hostile or detrimental to private enterprise or foreign investment than those of more developed countries, including expropriation of assets, confiscatory taxation, high rates of inflation or unfavorable diplomatic developments. In the past, governments of such nations have expropriated substantial amounts of private property, and most claims of the property owners have never been fully settled. There is no assurance that such expropriations will not reoccur. In such an event, it is possible that a strategy could lose the entire value of its investments in the affected market. Some countries have pervasive corruption and crime that may hinder investments. Certain emerging markets may also face other significant internal or external risks, including the risk of war, and ethnic, religious and racial conflicts. In addition, governments in many emerging market countries participate to a significant degree in their economies and securities markets, which may impair investment and economic growth. National policies that may limit investment opportunities include restrictions on investment in issuers or industries deemed sensitive to national interests.

Emerging markets may also have differing legal systems and investments in such emerging markets may be affected by the existence or possible imposition of exchange controls, custodial restrictions or other foreign or U.S. governmental laws or restrictions applicable to such investments. Sometimes, they may lack or be in the relatively early development of legal structures governing private and foreign investments and private property. Many emerging markets do not have income tax treaties with the United States, and as a result, investments by a Fund may be subject to higher withholding taxes in such countries. In addition, some countries with emerging markets may impose differential capital gains taxes on foreign investors.

Practices in relation to settlement of securities transactions in emerging markets involve higher risks than those in developed markets, in part because an investor must use brokers and counterparties that are less well capitalized, and custody and registration of assets in some countries may be unreliable. The possibility of fraud, negligence, undue influence being exerted by the issuer or refusal to recognize that ownership exists in some emerging markets, and, along with other factors, could result in ownership registration being completely lost. An account would absorb any loss resulting from such registration problems and may have no successful claim for compensation. In addition, communications between the United States and emerging market countries may be unreliable, increasing the risk of delayed settlements or losses of security certificates.

Unforeseen Market Events Risk

Unpredictable events such as environmental or natural disasters, war, terrorism, pandemics, outbreaks of infectious diseases, and similar public health threats, recessions, or other events may significantly affect the economy and the markets and issuers in which a strategy invests. Certain

events may cause instability across global markets, including reduced liquidity and disruptions in trading markets, while some events may affect certain geographic regions, countries, sectors, and industries more significantly than others and exacerbate other preexisting political, social, and economic risks.

Risks of Derivative Transactions

Derivatives can be volatile and involve various types and degrees of risk, depending upon the characteristics of the particular derivative and the portfolio as a whole. Derivatives permit an account to increase or decrease the level of risk, or change the character of the risk, to which its portfolio is exposed in much the same way as the account can increase or decrease the level of risk, or change the character of the risk, of its portfolio by making investments in specific securities. However, derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in derivatives could have a large potential impact on an account's performance.

If an account invests in derivatives at inopportune times or judges market conditions incorrectly, such investments may lower the account's return or result in a loss. An account also could experience losses if its derivatives were poorly correlated with the underlying instruments or the account's other investments, or if the account were unable to liquidate its position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid and unpredictable changes in the prices for derivatives.

Risks of Selling Securities Short

Certain accounts may sell securities short, which is the sale of a security the account does not own. The account arranges with a broker to borrow the security being sold short and replaces the security by buying it at the current market price when it closes the short sale. If the price of the security sold short has increased since the time of the short sale, the account will incur a loss in addition to the costs associated with establishing, maintaining and closing out the short position. If the price of the security sold short has decreased since the time of the short sale, the account will experience a gain to the extent the difference in price is greater than these costs. A short sale creates the risk of a theoretically unlimited loss, in that the price of the underlying security could increase without limit. Furthermore, there can be no assurance that the security necessary to cover a short position will be available for purchase. Purchasing securities to close out the short position can itself cause the price of securities to rise further, thereby exacerbating the loss.

Use of Alternative Data Risk

The analysis and interpretation of alternative data involves a high degree of uncertainty. No assurance can be given that the alternative data utilized by FAM will be accurate and reliable, or that FAM will be successful in utilizing alternative data in its investment process. FAM has implemented policies and procedures that seek to mitigate the risk of receipt and use of material nonpublic information ("MNPI") through its alternative data subscriptions. Notwithstanding the implementation of such policies and procedures, FAM cannot ensure that the alternative data it has subscribed to does not contain MNPI. Moreover, there has been increased scrutiny from a

variety of regulators regarding the use of alternative data in this manner, and its use or misuse under current or future laws and regulations could create liability for FAM and its clients in numerous jurisdictions. FAM cannot predict what, if any, regulatory or other actions may be asserted with regard to alternative data, but any adverse inquiries or formal actions could cause reputational, financial, or other harm to FAM or its clients. Conversely, any future limitations on the use of alternative data could have a material adverse impact on the performance of the accounts that FAM manages.

Portfolio Turnover (Active Trading) Risk

Because FAM may engage in active trading of securities held in a client account, such client accounts may incur increased transaction costs and brokerage commissions, both of which can lower the actual return on an investment. Active trading may also increase short-term gains and losses, which may affect the taxes a client has to pay.

Cyber Security Risk

With the increasing use of the internet and technology in connection with business operations, accounts are susceptible to greater operational and information security risks through breaches of cyber security. Cyber security breaches include stealing or corrupting data maintained online or digitally, “denial of service” attacks on websites, the unauthorized monitoring, misuse, loss, destruction or corruption of confidential information, unauthorized access to systems, compromises to networks or devices that are used in managing an account, and operational disruption or failures in the physical infrastructure or operating systems that support an account. Cyber security breaches affecting FAM or an account’s other service providers may adversely impact an account, potentially resulting in financial losses or the inability to transact business for an account. For instance, cyber security breaches may interfere with the processing of transactions, cause the release of confidential information, impede trading, subject an account to regulatory fines or financial losses and/or cause reputational damage. Such costs may be ongoing because threats of cyber-attacks are constantly evolving. Issuers of securities in which the strategies invest are also subject to similar cyber security risks, which could result in material adverse consequences for such issuers and may cause the strategy’s investment in such companies to lose value. There can be no assurance that accounts or their service providers, or the issuers of the securities in which the strategies invest, will not suffer losses relating to cyber security breaches in the future. In addition, FAM has no control over the cybersecurity protections established by its service providers or third-party vendors. Despite reasonable precautions, the risk remains that such incidents could occur, and that such incidents could cause damage to individual investors due to the risk of exposing confidential personal data about investors to unintended parties.

Risk of Investing in Crypto Assets

Crypto assets (also referred to as “digital assets”) are financial instruments which exist in a digital form and may act as a store of wealth, a medium of exchange or an investment asset. A strategy will generally not invest directly in crypto assets.

Crypto assets are not backed by any government, corporation, or other identified body. The value of a crypto asset may decline precipitously (including to zero) for a variety of reasons, including, but not limited to, regulatory changes, a loss of confidence in its network or a change in user preference to other crypto assets. An issuer that owns crypto assets may experience custody issues, and may lose its crypto asset holdings through theft, hacking, and technical glitches in the applicable blockchain. A strategy may experience losses as a result of the decline in value of its securities of issuers that own crypto assets or which provide crypto asset-related services. If an issuer that owns crypto assets intends to pay a dividend using such holdings or to otherwise make a distribution of such holdings to its stockholders, such dividends or distributions may face regulatory, operational and technical issues.

Use of AI Risk

If the content and analyses that AI applications assist FAM in producing are or are alleged to be deficient, inaccurate, or biased, FAM may be adversely affected. Additionally, AI tools used by FAM may produce inaccurate, misleading or incomplete responses that could lead to errors in FAM's and its employees' decision-making, portfolio management or other business activities, which could have a negative impact on performance. Legal and regulatory changes, particularly related to information privacy and data protection, may have an impact on AI, and may additionally impact FAM. AI tools and technologies and their current and potential future applications, and the regulatory frameworks within which they operate, continue to rapidly evolve, and it is not possible to predict the full extent of future applications or regulations and the associated risks to FAM.

Additional Risks Associated with Certain FAM Strategies

Some of the specific types of strategies FAM employs can create additional risks beyond those already discussed. Listed below are these strategies and a description of these additional risks.

Risks of Levered Accounts

This risk applies to the Spectra, Life Sciences Innovation, Dynamic Opportunities, and Dynamic Return strategies.

The cost of borrowing money to leverage may exceed the returns for the securities purchased, or securities purchased may go down in value; thus, an account's value can decrease more quickly than if the account had not borrowed.

Focus Strategies

This risk applies to any FAM strategy with a small number of holdings.

These strategies invest a substantial portion of their assets in a small number of issuers, and so may be more vulnerable to changes in the market value of a single issuer and more susceptible to risks associated with a single economic, political, or regulatory occurrence than a strategy that has a higher number of holdings. At times, the performance of shares of particular companies will lag the performance of other sectors or the market as a whole. This risk is magnified when a strategy

has a small number of holdings. Generally, the more broadly a strategy invests, the more it spreads its risks and potentially reduces the risk of loss and volatility.

Socially Responsible Strategies

This risk applies to the SRI Capital Appreciation and Responsible Investing strategies.

Accounts invested primarily utilizing socially responsible investment criteria may limit the number of available investment opportunities, and as a result, at times the accounts' returns may be less than those of accounts that are not subject to such special investment considerations. Moreover, companies that promote socially responsible programs may not perform as well as companies that do not pursue such goals.

Health Sciences and Life Sciences Innovation Strategies

This risk applies to the Health Sciences and Life Sciences Innovation strategies.

The value of accounts that invest a significant portion of their assets in the health sciences sector may be more volatile than that of accounts that do not similarly concentrate their investments. Accounts following such a strategy will be substantially more susceptible to the risks which affect companies in the health sciences sector.

Investments in pharmaceutical and other health care related companies involve a high degree of business, financial, technological and regulatory risk which can result in substantial losses. At times, the performance of pharmaceutical and other health care related companies will lag the performance of other industries or the broader market as a whole, and the performance of such companies may be more volatile. Healthcare companies may also be significantly affected by limited operating histories, intense competition, aggressive pricing, government regulation, technological innovations, product obsolescence, patent considerations, product compatibility and consumer preferences.

Growth & Income Strategy

This risk applies to the Growth & Income strategy.

Companies may cut or fail to declare dividends for a variety of reasons. Additionally, returns from income producing securities may trail returns from the overall stock market. Specific types of securities tend to go through cycles of doing better—or worse—than the stock market in general. These periods have, in the past, lasted for as long as several years.

AI Enablers & Adopters Strategy

This risk applies to the AI Enablers & Adopters strategy.

Companies involved in, or exposed to, AI-related businesses may have limited product lines, markets, financial resources or personnel. These companies face intense competition and potentially rapid product obsolescence, and many depend significantly on retaining and growing the consumer base of their respective products and services. AI companies typically engage in

significant amounts of spending on research and development, and there is no guarantee that the products or services produced by these companies will be successful. AI companies, especially smaller companies, tend to be more volatile than companies that do not rely heavily on technology.

(9) Disciplinary Information:

As of December 31, 2024, there are no legal or disciplinary actions involving FAM or any of its affiliates.

(10) Other Financial Industry Activities and Affiliations:

FAM is affiliated with FAC, a registered broker-dealer. FAC serves as the principal underwriter for the U.S. registered mutual funds and ETFs advised by FAM, as a placement agent for certain private funds managed by FAM and WC, as a broker-dealer for U.S. listed equity securities trades placed on behalf of certain clients of FAM, and provides distribution support to AML for the Alger SICAV. FAC does not conduct public brokerage business and substantially all of its transactions are in U.S. equities for those FAM clients who authorize FAM to use FAC as a broker, provided that relevant regulations that govern their accounts allow it. FAC does not act as principal in any client trade nor does it underwrite the offering of securities (except as the principal underwriter for certain U.S. registered mutual funds and ETFs advised by FAM). On a regular basis, FAM evaluates whether the commissions, rates and fees charged by FAC are commercially reasonable. Certain employees and officers of FAM serve as registered representatives and principals of FAC.

FAM is under common ownership with WC, a registered investment adviser based in Boston, Massachusetts, RI, a registered investment adviser based in Boston, Massachusetts, and AML, a UK registered investment adviser. FAM provides significant management, distribution, administration, back-office, legal and compliance, and trading support for WC, RI and AML. WC and RI each serve as a sub-adviser for a number of FAM accounts, including accounts managed for certain U.S. registered mutual funds and ETFs. FAM serves as a sub-adviser to AML for certain accounts, including as sub-portfolio manager for Alger SICAV.

FAM is the investment adviser to The Alger Funds, The Alger Funds II, The Alger Portfolios, The Alger Institutional Funds, Alger Global Equity Fund, and The Alger ETF Trust, each of which is a U.S. registered investment company.

FAM is the investment manager for Alger Dynamic Return Fund, Alger Life Sciences Innovation Fund, and Alger Life Sciences Innovation Offshore Fund, each of which is a privately offered fund.

FAM serves as the sub-portfolio manager for Alger SICAV, a publicly offered fund registered in Luxembourg, other jurisdictions in the European Union, Switzerland, the United Kingdom, Japan, Korea, and Singapore. Not all sub-funds of the Alger SICAV are registered in these jurisdictions.

FAM also serves as a sub-adviser to third-party registered and private funds, as well as bank collective investment trusts. From time to time, FAM, its affiliates or a related person (“Alger Affiliates”) may own significant stakes in one or more of the above entities.

From time to time, FAC, WC, FAM, RI, AGH, or AAI, or other affiliated persons may hold controlling positions in certain pooled investment vehicles, such that they are considered affiliates.

Conflicts as a Result of FAM's Affiliates

Client Recommendations

FAM may recommend to clients that they purchase interests in certain funds for which FAM serves as investment adviser or sub-adviser and/or in which FAM and related persons have a financial interest. FAM and such related persons will fully disclose such financial interests to all clients to which such recommendations are given in accordance with applicable regulations.

Selection of Administrative and Other Service Providers

Alger Affiliates currently provide administrative services, shareholder services, and other account services to certain of its clients. While any such engagement should be on market terms, it will nevertheless result in greater benefit to FAM than hiring a similarly qualified unaffiliated service provider.

In connection with these services and subject to applicable law, Alger Affiliates, including FAM, may from time to time, and without notice to investors or clients, insource or outsource certain processes or functions that it provides in its administrative or other capacities. Such insourcing or outsourcing may give rise to additional conflicts of interest, including which processes or functions to insource or outsource, which entity to outsource to, and the fees charged by Alger Affiliates or the third-party.

FAM maintains policies designed to mitigate the conflicts described in these paragraphs; however, such policies may not fully address all situations described above.

Information FAM May Receive

FAM and its affiliates may have or be deemed to have access to information about certain markets, investments, and funds because of Alger Affiliates' activities. Alger Affiliates may therefore possess information which, if known to FAM, might cause FAM to seek to dispose of, retain, or increase interests in investments held by accounts, or acquire certain positions for the accounts. Moreover, FAM and its affiliates may come into possession of material, non-public information that would prohibit or otherwise limit its ability to trade on behalf of client accounts. FAM maintains policies designed to mitigate the conflicts described in this paragraph; however, such policies may not fully address all situations described above.

Resources Shared Among Alger Affiliates

FAM shares certain resources with, receives certain services from, and provides certain services to various Alger Affiliates. Additionally, FAM, WC, and RI can share general information with respect to regulatory developments and industry trends affecting or potentially affecting U.S. and/or foreign markets, sectors, industries, and specific companies. Such relationships may present conflicts with FAM's provision of advisory services to its clients.

(11) Code of Ethics, Participation or Interest in Client Transactions and Personal Trading:

FAM has adopted a Code of Ethics (“the Code”) pursuant to Rule 204A-1 under the Advisers Act that establishes general principles of conduct for Alger employees, including employees’ duty always to place the interests of clients first and not take advantage of their positions.

In general, the Code requires employees to avoid any actual or potential conflict of interest by, among other things, reporting outside business activities, pre-clearing personal securities transactions, submitting duplicate confirmations and account statements, and regularly certifying to FAM’s Compliance department that they are in compliance with the Code. The Chief Compliance Officer is responsible for the administration of the Code, and his/her designees generally determine whether employee personal transactions and outside business activities pose any actual or potential conflict of interest with FAM’s investment advisory activities.

The Code will be provided to any client or prospective client upon request.

Potential Conflicts Relating to Advisory Activities

A conflict of interest will exist to the extent that FAM recommends that its clients invest in securities in which one or more Alger Affiliates has a material financial interest, or in securities where Alger Affiliates or other clients of FAM or its affiliates have invested in other parts of the capital structure of the issuer. Clients should be aware that FAM may have an incentive to make decisions for its own benefit or the benefit of an Alger Affiliate with respect to mutual funds, ETFs and other investment products in which it or an Alger Affiliate owns significant stakes.

FAM also has conflicts related to its management of client accounts alongside accounts (including FAM-advised funds) in which Alger Affiliates and their personnel have interests (collectively, the “Alger Affiliates Accounts”).

Additionally, to the extent FAM or Alger Affiliates own a significant percentage of the outstanding shares of registered or private funds, FAM may be deemed to control that entity, and FAM clients may be precluded or limited in its ability to make certain investments or participate in certain transactions because of the ownership interest of FAM or Alger Affiliates.

(12) Brokerage Practices:

Execution

Most clients give FAM discretion as to the selection of brokers or dealers to effect securities transactions.

For U.S. and non-U.S. equity securities, FAM generally executes its trades through a broker-dealer. FAM also makes use of electronic or program, direct market access and algorithmic trading methods. FAM also executes, when appropriate, “baskets” of multiple equity trades using program trading facilities. FAM may also use appropriate algorithmic trading strategies, including within dark pools, provided by select broker-dealers to execute an equity order. Algorithmic trading strategies use advanced mathematical models with rules to determine the ideal time to place a

transaction without affecting the security's price. FAM also maintains relationships with certain counterparties to execute over-the-counter ("OTC") fixed income and derivatives trades.

When FAM trades in listed derivatives, such as exchange-traded options, the trades are executed via an agency member firm. For OTC derivatives, FAM works with counterparties under established contractual arrangements.

When placing trades for its clients, FAM seeks the best overall execution under the prevailing circumstances. FAM considers more than the lowest commission price when evaluating which broker-dealers may provide best overall execution for a trade. FAM considers the following factors, among others, when selecting the broker-dealer:

- Liquidity of the market for the security and the broker-dealer's access to markets;
- Sophistication of the broker-dealer's trading facilities, trading style and strategy, including order routing arrangements;
- Speed of trade execution;
- Ability to handle difficult trades;
- Technology offerings;
- The broker-dealer's financial solvency;
- Quality of settlement process;
- The broker-dealer's commission rate;
- Reliability and quality of executions;
- Trading expertise, including specialized expertise;
- Back-office efficiency, including quality of confirmations and account statements, and ability to settle trades in a timely fashion;
- The broker-dealer's reputation and integrity; and
- Confidentiality.

FAM prioritizes these factors differently depending upon the specific circumstances surrounding a trade, which includes the nature and objectives of the client and the asset class.

To the extent permitted by applicable law and as authorized in FAM's investment management agreements with clients, FAM directs client trades in securities listed on a U.S. exchange to FAC, a registered broker-dealer and an affiliate of FAM. Trading with FAC can create potential conflicts of interest. For example, FAC will generally earn commissions for executing transactions, which may incentivize FAM to trade more frequently with FAC or to execute transactions at less favorable prices. As such, FAM maintains policies and procedures to ensure that the commissions, brokerage fees, other fees, and other compensation or rates charged by, profits earned by, and terms and conditions of the relationship with, FAC are commercially reasonable. FAC does not act as principal in any client trade nor does it underwrite the offering of securities (except as the principal underwriter for certain U.S. registered mutual funds and ETFs advised by FAM).

Soft Dollars

FAM primarily relies on its in-house research to provide buy and sell recommendations. However, FAM does acquire research services provided by third-party vendors, some of which it pays for

with brokerage fees and commissions, sometimes referred to as “soft dollars.” The services that FAM may receive include:

- Management meetings
- Conferences
- Research on specific industries
- Research on specific companies
- Macroeconomic analyses
- Analyses of national and international events and trends
- Access to experts on a particular sector, industry or security
- Evaluations of thinly traded securities
- Computerized trading screening techniques and securities ranking services
- General research services (*i.e.*, Bloomberg, FactSet)
- Alternative data subscriptions

Consistent with the “safe harbor” provisions of Section 28(e) of the Securities Exchange Act of 1934, as amended, FAM will sometimes select brokers that charge higher commissions to provide brokerage and research services than would be charged by brokers providing trade execution services only. This benefits FAM because it does not have to pay for research products or services. Such benefit gives FAM an incentive to select a broker-dealer based on its interest in receiving the research products or services rather than on its clients’ interest in receiving the most favorable execution.

FAM periodically monitors execution and commission rates for trades placed with such brokers to assess the overall quality of such trade executions versus comparable trades with non “soft dollar” brokers. Research or other services obtained in this manner are used in servicing any or all of FAM’s accounts. This includes accounts other than those that pay commissions to the broker providing soft dollar benefits. Therefore, such products and services may disproportionately benefit certain accounts to the extent that the commissions from such accounts are not used to purchase such services.

FAM has entered into commission sharing arrangements, which enable FAM to aggregate commissions at a particular broker-dealer. FAM can then direct that particular broker-dealer to pay various other broker-dealers from this pool of aggregate commissions for research and research services the broker-dealers have provided to FAM. These arrangements allow FAM to limit the broker-dealers it trades with, while maintaining valuable research relationships.

In certain cases, a research service may serve additional functions that are not related to the making of investment decisions (such as accounting, record keeping or other administrative matters). Where a product obtained with commissions has such a mixed use, FAM will make a good faith allocation of the cost of the product according to its use. FAM will not use soft dollars to pay for services that provide only administrative or other non-research assistance.

Directed Brokerage

FAM does not consider client referrals when it selects a broker-dealer for executing trades on behalf of the accounts it advises. Further, no U.S. registered fund advised by FAM is allowed to direct brokerage to any broker in exchange for sales of shares of those funds.

Separate account clients may direct brokerage to a specific firm or firms of their choosing. A client that designates use of a particular broker-dealer should understand that such an instruction might prevent FAM from freely negotiating commission rates or selecting brokers based on the most favorable price and execution for the transaction.

Clients also may prohibit FAM from placing transactions for their accounts with certain broker-dealers. A client that prohibits FAM from selecting certain broker-dealers for the placement of transactions for its account should understand that such a prohibition prevents FAM from selecting a restricted broker-dealer even though such broker-dealer may offer a more favorable price and execution for the transaction.

A client that directs brokerage to a specific firm or prohibits the use of certain broker-dealers may lose the possible advantage that non-designating and unrestricted clients derive from aggregating orders into single larger transactions, utilizing alternative trading venues, or using alternative trading techniques for the purchase or sale of a particular security. FAM will generally place orders for clients that have given FAM full brokerage discretion first, then for clients that have requested a specific broker or limited the use of one or more brokers. This may negatively impact the price at which trades are completed for such clients.

FAM periodically monitors execution and commission rates for accounts that direct brokerage to a specific broker-dealer and may report to a client when execution and commission rates seem unreasonable versus comparable trades with a non-directed broker-dealer.

Client instructions to use a certain broker-dealer or restrict trading with a particular broker-dealer may cause a client to pay higher commissions, receive less favorable net prices or investment results, or incur additional custodial or other external administrative charges than would be the case if FAM were authorized to choose the broker-dealers through which to execute transactions for the client's account.

Trade Aggregation

If FAM believes that the purchase or sale of a security is in the best interest of more than one account, it has the option (but is not obligated) to aggregate these orders. When trades are aggregated, prevailing trading activity frequently may make impossible the receipt of the same price or execution on the entire volume of securities purchased or sold. When this occurs, the various prices are generally averaged, and a participating account will be charged or credited with the average price. Thus, the effect of the aggregation may operate on some occasions to the disadvantage of an individual account.

Orders to purchase or sell the same security are not aggregated in certain circumstances. This may be the case when there is a reasonable distinction between or among the orders. For example,

orders without specific price requirements do not have to be aggregated with orders that are to be executed at a specific price. Also, certain accounts may be excluded from an aggregated trade if an account or accounts have a greater relative need to trade separately from other accounts due to legal, risk, tax, or other investment considerations.

FAM maintains policies and procedures that it believes are reasonably designed to deal equitably with conflicts of interest that may arise when orders are aggregated.

FAM may aggregate trades for its clients and Alger Affiliates in private placements pursuant to internally developed procedures. In such cases, FAM will negotiate the material terms of such investments, including the price of such investments, and will prepare a written allocation statement reflecting the allocation of the private securities.

Trade Allocation

Conflicts can emerge due to how FAM manages client accounts and allocates investment opportunities. To attempt to treat all clients reasonably in light of all factors relevant to managing an account, aggregated trades will generally be allocated pro rata among the accounts whenever possible. There are exceptions to this practice, however. Some of these exceptions are described below:

Unusual Market Conditions

During periods of unusual market conditions, FAM may deviate from its normal trade allocation practices. During such periods, FAM will seek to exercise a disciplined process for determining its actions to appropriately balance the interests of all accounts.

Availability of Investments

The availability of certain investments such as IPOs or private placements may be limited. In such cases, all accounts may not receive an allocation, and the performance of accounts which receive such allocations may be higher or lower than other accounts.

FAM, as a general practice, allocates IPOs and other limited availability investments pro rata among eligible accounts, as requested by portfolio managers and in accordance with applicable policies and procedures. An account may not receive an allocation because it lacks available cash, is restricted from making certain investments, is considered an Alger Affiliate, is so large that the allocation is determined to be insignificant or is so small that it would receive little or no allocation. Moreover, Alger Affiliates accounts may receive an allocation of an opportunity not allocated to other accounts.

Differing Guidelines, Objectives and Time Horizons

Because accounts are managed according to different strategies and individual client guidelines, certain accounts may not be able to participate in a transaction considered by FAM.

Actions taken by one account could affect others. A sale of securities by one account may cause a decline in the market value of those securities and other securities of the same issuer, having a

material adverse effect on the performance of other accounts that hold those securities and do not sell such positions.

FAM may also develop and implement new investment approaches, which may not be employed in all accounts or pro rata among the accounts where they are employed, even if the approach is consistent with the objectives of all accounts. FAM may make decisions regarding the allocation of new investment approaches based on such factors as strategic fit and other portfolio management considerations, including:

- An account's capacity for such approach
- The liquidity of the approach and its underlying instruments
- The account's liquidity
- The business risk of the approach relative to the account's overall portfolio make-up
- The effectiveness of, or return expectations from, the approach for the account
- Any other factors FAM deems relevant in its sole discretion

For example, such a determination may, but will not necessarily, include consideration of the fact that a particular approach will not have a meaningful impact on an account given the overall size of the account, the limited availability of opportunities in the approach and the availability of other approaches for the account.

For ease of management, FAM may group accounts with similar guidelines together for portfolio management purposes. As a result, an account may not invest in certain securities that its guidelines would allow because other similar accounts restrict such holdings. This could affect the performance of the account.

Conflicts Related to Timing of Transactions

While FAM will aggregate trades on behalf of similarly situated clients, there are instances when FAM places a trade ahead of, or contemporaneously with, trades for another account. In such cases, market impact, liquidity constraints, or other factors could result in the second account receiving less favorable trading results. The costs of implementing trades could be increased or the other account could otherwise be disadvantaged.

Although investment recommendations can apply to securities held across multiple strategies and held in multiple individual accounts, each account is managed separately. While FAM will use reasonable efforts to obtain timely execution across all accounts that may be affected by an investment recommendation, there can be no guarantee that such investment recommendation will be implemented simultaneously. It is possible that prior execution for or on behalf of an account or group of accounts could adversely affect the prices and availability of the securities and instruments for other accounts that later seek to trade the same securities or instruments.

FAM can delay an order for one account or group of accounts to allow portfolio managers of other strategies to participate in the same trade. In some instances, internal policies designed to facilitate trade aggregation may result in delays in placing trades, which may adversely affect trade execution.

Cross Transactions

From time to time and for a variety of reasons, certain FAM accounts may buy or sell positions in a particular security while certain other accounts are undertaking the opposite strategy, which could disadvantage some of the accounts. To reduce any negative impact, and when permitted by applicable law and client authorization and when otherwise practical to do so, the accounts will enter into “cross transactions.” A cross transaction, or cross trade, occurs when FAM causes an account to buy a security from, or sell a security to, another client of FAM. FAM will ensure that any such cross transactions are effected in accordance with applicable law and policies and procedures.

Wrap Programs

Wrap accounts generally follow a distinct trading process from other accounts. Portfolio manager recommendations are provided simultaneously to FAM’s accounts and wrap accounts but are reviewed and handled separately given the considerations and constraints that exist in such wrap accounts. These considerations include: security type constraints (e.g., no foreign securities, private placements, IPOs), trade and position size, cash levels to be maintained, cash flows, holding periods, and the ability of a sponsor to implement a trade. To limit the frequency of smaller sized trades for the wrap program accounts, FAM has implemented trade size guidelines on wrap program trades. These limitations will vary depending on the FAM strategy and wrap program type. Once determined, wrap trades are reviewed to ensure they are compliant with the specific wrap strategy and/or account guidelines. The trades are then submitted generally once per day to the various wrap sponsors according to a randomly selected rotation. As a result, FAM typically takes more time to review and implement recommended transactions for wrap accounts; and therefore, wrap accounts generally trade after separate accounts and funds.

For Model Portfolio Programs, FAM does not place trades on behalf of client accounts and therefore has no ability to ensure that accounts conform to the model portfolio provided. Moreover, a sponsor may place trades in fractional shares of securities, possibly resulting in trades at different prices than trades in whole shares of securities and thus unfavorable trading outcomes. A Model Portfolio Program sponsor may also lower a model portfolio’s investment minimum at its own discretion and without the knowledge of FAM in order to increase access for clients. Lower investment minimums may increase competition for limited investment opportunities and prevent the inclusion of certain investment opportunities in the portfolio, potentially affecting investment performance.

Because wrap clients generally pay the wrap sponsor to effect transactions for their accounts, FAM generally does not aggregate transactions on behalf of wrap accounts with non-wrap accounts. Transactions through different sponsors are also not aggregated.

For wrap program accounts, FAM generally does not negotiate brokerage commissions or other costs related to the execution of trades because those charges are generally included in the single fee paid by the client to the sponsor, and the client has generally contractually agreed to execute trades through the wrap sponsor. If FAM selects a broker-dealer other than the sponsor, the client will typically pay a commission, concession, or dealer mark-up or mark-down, in addition to the wrap fee paid to the sponsor, as well as other administrative fees to settle such a transaction.

(13) Review of Accounts:

FAM's portfolio managers, Compliance department and Institutional Sales and Service department review each client's portfolio guidelines when an account is opened, and when changes are made. Portfolio managers work closely with the Trading and Compliance departments to seek to adhere to client guidelines when making security selection decisions.

FAM's Compliance department regularly reviews accounts for compliance with each client's investment objectives, policies and restrictions using an automated compliance monitoring system. Prior to execution, portfolio trades generally pass through real-time compliance checks that test the trade against account guidelines. Certain guidelines which cannot be automated (and therefore are not reviewed pre-trade) are reviewed manually (and therefore are reviewed post-trade); the frequency of these checks depends on the client guideline. Post-trade and end of day reports are also monitored daily.

All accounts are also reviewed by the Client and Portfolio Administration department for the purpose of reconciling FAM's records with those of the account's custodian. Cash and portfolio holdings are reconciled by the Client and Portfolio Administration department daily and the Client and Portfolio Administration department prepares month-end separate account reconciliations (including cash balances and cash transactions, security positions, local market values, prices and accruals, where applicable) to a client's custodian bank account statement.

Each client receives a quarterly or monthly written report containing information about their account holdings and activity in the account during the period. Certain clients also receive historical performance reports on a monthly or other periodic basis. Clients may also receive specialized reporting at their request.

(14) Client Referrals and Other Compensation:

Other Compensation

FAM does not receive any compensation from third parties relating to advisory services provided to its clients.

Compensation of Third Parties for Client Referrals

Referral Fees

From its advisory fees, FAM pays fees to financial intermediaries, advisers, and financial planners, among other individuals and entities, in return for referring potential clients. Alger Affiliates may also pay intermediaries who recommend FAM to their clients for separate account management

services, wrap fee program services, or funds advised by FAM. Individual payment agreements vary, and some intermediaries may have a greater incentive to recommend FAM's services because the intermediary receives a higher fee as a result.

FAM may also pay a fee to pension and corporate consultants for certain services the consultants provide to FAM. These consultants may recommend FAM to potential clients and may also advise current FAM clients. FAM may also pay Alger Affiliates for referring potential clients.

FAM currently has relationships with third-party firms to assist in sourcing business in Israel.

Marketing Payments

Subject to applicable law, FAC may pay dealers and other financial intermediaries for, among other things, marketing the mutual funds, ETFs, and other products managed by FAM. Such payments may relate to or result in the funds' and other investment products' inclusion on preferred or recommended investment lists or certain sales programs sponsored by the intermediaries. FAC may also participate in or partially sponsor industry and consultant sponsored conferences and may pay for access to intermediaries' registered representatives or salespersons. FAC may also pay to assist in the training and education of intermediaries' salespersons.

Intangibles

Alger Affiliates may have board, advisory, brokerage, or other relationships with issuers, distributors, consultants and others. These persons or entities may have investments in the mutual funds, ETFs or other investment products and may recommend or distribute the mutual funds, ETFs or other products managed by FAM. Alger Affiliates may make charitable contributions to institutions, including those that have relationships with clients, personnel of clients, dealers and other financial intermediaries and/or their registered representatives, and pension consultants.

As a result of the relationships and arrangements described in the preceding paragraphs, consultants, distributors, and other parties may have conflicts associated with their promotion of the mutual funds, ETFs or other investment products managed by FAM or other dealings that create incentives for them to promote the mutual funds or other products or certain portfolio transactions.

(15) Custody:

Although FAM generally does not hold client assets, FAM may be "deemed," for purposes of the Advisers Act, to have custody of certain of its discretionary clients' assets because it has related persons that serve as general partners of private funds, and because it has the authority to collect its fees directly from certain client accounts. In these cases, clients will receive account statements from both FAM and their custodians. Clients should review these statements carefully and compare them to each other.

(16) Investment Discretion:

FAM generally has the discretionary authority to make continuous investment determinations on behalf of its clients pursuant to an investment advisory agreement that describes the investment

services to be provided. Clients can limit or restrict FAM's discretionary authority over their account by imposing investment guidelines or restrictions.

FAM may also be retained by certain wrap program sponsors to provide model portfolios. Based on the model portfolio provided, these wrap program sponsors exercise investment discretion and execute portfolio transactions for their clients' accounts. FAM is not exercising investment discretion with respect to these accounts.

FAM also provides non-discretionary advisory services to certain institutional investors.

(17) Voting Client Securities:

Clients may grant authority to or withhold authority from FAM to vote proxies.

If a client withholds authority from FAM to vote its proxies, the client should make arrangements directly with its custodian to receive proxy statements. While a client who withholds authority may seek FAM's guidance in this regard, proxy issues are often time sensitive, and it may not be practical to request FAM's input.

If a client grants FAM authority to vote its proxies, FAM exercises its proxy voting authority generally by evaluating the recommendations of Institutional Shareholder Services Inc. ("ISS"). Unless otherwise requested by a client, FAM has determined to have ISS recommend votes based upon ISS's Socially Responsible Investment Proxy Voting Guidelines. For certain clients, upon their request, FAM has instructed ISS to recommend votes based upon ISS's Taft-Hartley U.S. Voting Guidelines or Global Board-Aligned Voting Guidelines. When issuing vote recommendations and casting proxy votes, ISS discloses any conflicts of interest it has with the issuer of such securities that are the subject of its recommendations. To the extent ISS has a material conflict of interest with the company whose proxies are at issue, it may recuse itself from recommending a vote or voting proxies. In such cases, FAM instructs ISS how to vote without ISS's recommendation. FAM regularly considers the robustness of ISS' policies and procedures regarding its ability to (i) ensure that its proxy voting recommendations are based on current and accurate information and (ii) identify and address any conflicts of interest.

Given the different interests and guidelines of clients, FAM may vote proxies differently for various clients holding the same security. Notwithstanding FAM's proxy voting policies and procedures, proxy voting decisions may favor the interests of certain clients or Alger Affiliates over other clients. FAM maintains proxy statements received, records of its proxy voting policies and procedures (which are available upon client request and on FAM's website at <https://www.alger.com/Pages/Archive.aspx?listType=Notices>), records of votes cast on behalf of each account, records of requests for proxy voting information, and any documents prepared that were material to making a voting decision.

Class Actions

In addition to voting rights with respect to securities held in our client portfolios, there may be other rights associated with those securities, including the right or opportunity to participate in class action, bankruptcy, or other litigation with respect to those securities. As a general matter,

FAM participates in class action, bankruptcy settlement claims, or other litigation with respect to the issuers of securities held in the accounts of its separate account clients, unless otherwise mandated in an account's investment management agreement or otherwise agreed to. In addition, FAM will, at a client's request, assist clients and their agent(s) in determining their eligibility to participate in any given class action. With respect to corporate actions (such as an issuer's merger, tender offer, dividend distribution, etc.), FAM participates on behalf of clients who authorize the firm to do so, taking such action as the firm deems to be in the best interest of the portfolio. FAM uses ISS Securities Class Action Services for class action administration and processing.

(18) Financial Information:

Not applicable.

(19) Requirements for State-Registered Advisers:

Not applicable. FAM is not a State-Registered Adviser.

FACTS**WHAT DOES ALGER DO WITH YOUR PERSONAL INFORMATION?**

Why?	Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.	
What?	<p>The types of personal information we collect and share depend on the product or service you have with us. This information can include:</p> <ul style="list-style-type: none"> ■ Social Security number and ■ Account balances and ■ Transaction history and ■ Purchase history and ■ Assets <p>When you are <i>no longer</i> our customer, we continue to share your information as described in this notice.</p>	
How?	All financial companies need to share personal information to run their everyday business. In the section below, we list the reasons financial companies can share their personal information; the reasons Alger chooses to share; and whether you can limit this sharing.	
Reasons we can share your personal information	Does Alger share?	Can you limit this sharing?
For our everyday business purposes— such as to process your transactions, maintain your account(s), respond to court orders and legal investigations, or report to credit bureaus	Yes	No
For our marketing purposes— to offer our products and services to you	Yes	No
For joint marketing with other financial companies	No	We don't share
For our affiliates' everyday business purposes— information about your transactions and experiences	Yes	No
For our affiliates' everyday business purposes— information about your creditworthiness	No	We don't share
For nonaffiliates to market to you	No	We don't share
Questions?	Call 1-800-223-3810	

Who we are	
Who is providing this notice?	Alger includes Fred Alger Management, LLC and Fred Alger & Company, LLC as well as the following funds: The Alger Funds, The Alger Funds II, The Alger Institutional Funds, The Alger Portfolios, Alger Global Equity Fund and The Alger ETF Trust.
What we do	
How does Alger protect my personal information?	To protect your personal information from unauthorized access and use, we use security measures that comply with federal law. These measures include computer safeguards and secured files and buildings.
How does Alger collect my personal information?	We collect your personal information, for example, when you <ul style="list-style-type: none"> ■ Open an account or ■ Make deposits or withdrawals from your account or ■ Give us your contact information or ■ Provide account information or ■ Pay us by check.
Why can't I limit all sharing?	Federal law gives you the right to limit only <ul style="list-style-type: none"> ■ sharing for affiliates' everyday business purposes—information about your creditworthiness ■ affiliates from using your information to market to you ■ sharing for nonaffiliates to market to you <p>State laws and individual companies may give you additional rights to limit sharing.</p>
Definitions	
Affiliates	Companies related by common ownership or control. They can be financial and nonfinancial companies. <p><i>Our Affiliates include Fred Alger Management, LLC, Fred Alger & Company, LLC, Weatherbie Capital, LLC, and Redwood Investments, LLC as well as the following funds: The Alger Funds, The Alger Funds II, The Alger Institutional Funds, The Alger Portfolios, Alger Global Equity Fund and The Alger ETF Trust.</i></p>
Nonaffiliates	Companies not related by common ownership or control. They can be financial and nonfinancial companies.
Joint marketing	A formal agreement between nonaffiliated financial companies that together market financial products or services to you.
